NO,
IT'S NOT JUST A MATTER OF FASHION

Being respectful of the environment and taking care of it cannot and should not be just a matter of fashion. "Going green" means taking care of our planet, which is also our home, and it shouldn't be just a movement, let alone an imposition. Basically, to go green means doing the right things that need to be done.

It is widely known that all the hazardous substances we release into the environment make their way back to us through the food we eat, the water we drink and the air we breathe. Being green must be a lifestyle and an everyday behaviour for all of us, because everybody loves a clean planet, which is something we all deserve, right? Small, individual actions can change the planet, every day, starting from today.

Gommatex, some time ago, decided to play its part for all of us, our children and the new generations, with an aim to deliver a better planet and achieve, at the same time, peace of mind, knowing we have made the right choice.

Gommatex

Our savoir faire

LA PLANÈTE NOUS REGARDE

A brief history of success

A VISION, AN IDEA CAME INTO EXISTENCE 60 YEARS AGO

Gommatex Spalmati was established in 1960 by the Giovannelli family. Their major focus was to introduce an absolute novelty to the market, i.e. something that was ground-breaking and unique for the Prato district. The company has been growing exponentially ever since and is now present on both the national and international market alongside prestigious international brands.

RESEARCH AND INNOVATION THAT CREATE ECCELLENCE

Thanks to the integration with the chemical and the textile industry, today Gommatex is able to offer a broad range of items ranging from coagulated and polyurethane coated fabrics to jacquard denim fabrics and technical fabrics of various compositions, closing the circle with advanced digital printing. Our reference sectors are the leather, footwear and clothing industry, for which we create items intended for the global fashion industry and top luxury brands.

PERSISTENCE IN RESEARCH GENERATES RESULTS

Gommatex writes the future by industrializing an innovative and unique process in Europe. Starting from a bio-based polyurethane raw material and without using solvents, we have developed AKKADUEO BIO, an eco – friendly coagulated coated product. What makes AKKADUEO BIO stand out from the crowd is not only the sustainability matrix of the product itself, but the whole production process behind it.

Methane emissions reduced by 80%

Water consumption reduced by 45%

Power consumption reduced by 45%

JUST TALKING ABOUT IT IS NOT ENOUGH

In recent years, Gommatex has invested heavily in improving the energy and production efficiency of its manufacturing facility. Our photovoltaic system, for example, is able to supply 75% of the global energy requirement, whereas, thanks to the post-combustion system downstream of our processes, we are able to reduce CO2 emissions in the atmosphere by 60%. Also, by removing the solvent known as DMF in our process, we were able to reduce our overall water consumption by 50%.
Our goal for 2023 is **carbon neutrality**..

We are printing the future

We are proud to present Gommatex Digital Printing Evolution, our advanced printing department.
A targeted selection of machinery and the recruitment and training of specialized technicians has allowed us to create a cutting-edge department for printing polyurethane and leather supports.
We use ultra-modern, flexible and top-quality digital technologies, thanks to which we can quickly respond to our clients' needs with customized solutions. We can print on any kind or material, e.g. in rolls, held in place by jigs and on panels. Innovative software specifically developed by us enables controlling the colouring process using high- precision and reliable electronic systems during both the production phase and the sampling phase, thus ensuring the utmost quality and standardization of the process. Besides this, the company has an internal laboratory where all production checks and tests are carried out to deliver the utmost quality.
The output of our department is approximately 10,000 linear meters per week.
Gommatex Digital Printing Evolution; quality, flexibility and availability.
